Torrossa reinforces and extends collaboration with industry partners, committing further to global standards for metrics and accessibility

Torrossa is delighted to confirm its compliance with the new COUNTER 5 standard for e-book user statistics and to strengthen its relationship with the LIA Foundation for Accessible Italian Books.

As part of its commitment to providing a first-class resource for libraries, Torrossa's infrastructure is constantly updated to keep pace with technological advancements and ensure compliance with international standards and protocols.

COUNTER sets the global standard for measuring and reporting digital content usage through normalised metrics. Through compliance with this standard, Torrossa ensures the accuracy of usage statistics, responding to the needs of librarians and consortia and supplying reliable and consistent usage data that can support evidence-based communication and decision-making.

Created and powered by Casalini Libri, the Torrossa Digital Library benefits greatly from the consolidation of the company's relationship with the LIA Foundation for Accessible Italian Books, through its entry as a member of the Foundation in 2025. This step is the culmination of a long-standing and rewarding collaboration, beginning with the audit of the Torrossa digital publishing distribution platform in 2021, which has already brought significant results, achieving compliance with international accessibility standards well before the coming introduction of the new European legislation for accessibility.

Fondazione LIA has been working for over 10 years to support publishers in the process of creating accessible digital publications and collaborates with all those involved in the publishing chain to make the experience of choosing, purchasing and reading books accessible for all readers. Casalini Libri is proud to be a member and works towards the key objectives of expanding its catalogue of accessible content and improving user experience, specifically for the navigation of its platform and the reading of texts in digital formats.

An essential resource for original-language research in digital format, the Torrossa Digital Library offers access to academic publications from more than 580 important specialist academic publishers and university presses from across Europe, the UK and US.
